

Heat transfer fluids

## THERMERA®

**Thermera® AC** is an antifreeze and heat transfer fluid specially formulated for heating, geothermal and heat pump systems. It contains an organoleptic in accordance with French regulatory requirements for domestic hot water applications.

**Thermera® R** is an antifreeze and coolant specially formulated for refrigeration systems.

Based on a natural component derived from sugar production (betaine), it is non-toxic and has an extremely low impact on the environment. It meets the requirements of heating, ventilation and air conditioning systems for buildings, as well as those of the food processing and refrigeration industries.

At concentrations above 20%, betaine inhibits microbial growth. **Thermera®** has excellent anti-corrosion properties, low viscosity and high thermal and microbiological stability.

Thermera® is available in 6 designated concentrations with their freezing points:

- Thermera® -15° (or Thermera® AC)
- Thermera® -20°
- Thermera® -25°
- Thermera® -30°
- Thermera® -35° (or Thermera® AC)
- Thermera® -40°

**Thermera® AC** is 90% to 100% biodegradable in 28 days, with ultimate intrinsic biodegradability without preadaptation and primary intrinsic biodegradability according to OCDE 302B criteria extrapolated to a finished product.

### 1. HOW TO USE

Thermera® is ready to use and must never be diluted.

Heat transfer fluids should never be used in an open circuit, as evaporation will alter their concentration and the oxygen dissolved in the solution will cause oxygen corrosion.

Thermera® can be heated to a maximum continuous temperature of +100°C. Above this temperature, the solution will degrade slowly but will remain non-corrosive.

**Compatibility:** Thermera® is compatible with the usual metals: copper, brass, tin, cast iron, carbon steel and stainless steel. Galvanised steel, zinc and coated steel are not permitted.

It is compatible with standard pumps, elastomers and seals used in traditional systems with glycol-based solutions, such as neoprene, hypalon, EPDM, viton, buna N, HDPE, PP, PTFE (Teflon), PVDF, TS (Nitrile).

It is advisable to install "under-pressure" air vents in the circuit, or at least a manual air vent, ball valves, and welded and flanged joints. Filters must be cleanable.

It is advisable to clean the system before filling with **Thermera®**.

If the system is scaled or heavily oxidised with incrustations, clean with **Deoxyclean**, then rinse with Dispersant D.

If the system contains non-incrusted metal oxide deposits, clean with **Dispersant D**.

(see product data sheets available at [www.climalife.dehon.com](http://www.climalife.dehon.com)).

Never leave the system empty after cleaning and fill with **Thermera®** as soon as possible.

Fill via the valve located in the lower zone of the system and test operation.

In the event of leaks, the areas where **Thermera®** leaks will show slight white deposits made up of non-toxic and harmless crystals which can be wiped off with a damp cloth.

Annual monitoring by APC\* analysis is recommended to check the condition and correct operation of the installation and the **Thermera®**.

**Thermera®** must be stored in its original hermetically sealed packaging in a closed, covered room.

## 2. PHYSICO-CHEMICAL PROPERTIES OF THERMERA®

### 2.1 Principal characteristics

Specifications	Thermera® -15	Thermera® -20	Thermera® -25	Thermera® -30	Thermera® -35	Thermera® -40
Appearance	Clear caramel-brown liquid					
pH à 20°C	8 - 10					
Alkaline reserve over 20ml	1 ml					
Boiling temperature (°C)	104	105	106	107	108	109
Density at 20°C (kg/dm³)	1.066	1.074	1.082	1.086	1.093	1.097

### 2.2 Thermera® corrosion protection

**Thermera®** is additivated to protect against corrosion. These tests were carried out on **Thermera® -15**.

Metal	Mass variation (mg / test piece)	Standard limits NF R 15-601	Standard limits ASTM D 3306
Copper	± 3	[- 5 ; +5]	[- 10 ; +10]
Brass	± 3	[- 5 ; +5]	[- 10 ; +10]
Solder	± 3	[- 5 ; +5]	[- 30 ; +30]
Cast Aluminium	± 2	[- 10 ; +20]	[- 30 ; +30]
Cast Iron	± 2	[- 4 ; +4]	[- 10 ; +10]
Steel	± 1	[- 2,5 ; +2,5]	[- 10 ; +10]

Normative reference ASTM 1384 test method, at a temperature of 50°C.
